## Exhibit A

### **Conversion Table**

The below table contains the Debtors' view of prices for all types of cryptocurrencies listed on the Debtors' schedules as of 8:10 p.m., prevailing Eastern Time, on July 13, 2022 (i.e., approximately the time the Debtors commenced their chapter 11 cases). Prepetition, in the ordinary course of business, the Debtors determined the price of coins utilized in their services primarily by referencing pricing feeds such as Coingecko and CoinPaprika. For certain coins, the Debtors used "CPS," the Debtors' proprietary pricing engine. CPS processes inputs from five external sources (Chainlink, Coinmarketcap, Coingecko, CoinPaprika, and Fixer) to determine the price of a coin. The system evaluates averages, closing prices, and ten-day low prices from one or more of the inputs in assigning a price. In some circumstances, only a single input is utilized because it is all that is available (or reliably available) for a particular coin. The use of multiple inputs allows CPS to reduce the risk that outlier data points will result in an inaccurate price and also allows the Debtors' platform to support a wider variety of coins, as not every coin is priced on every input.
